

Emilio Gordillo Esparragoza

Software Engineer (Backend / Cloud) — Python, TypeScript, AWS

emilio.gordillo.dev@gmail.com · Mexico · github.com/Emilio-Gordillo-Esparragoza · [LinkedIn](#)

PROFESSIONAL SUMMARY

Software Engineer focused on backend and cloud systems. Builds APIs, data pipelines, and serverless architectures with Python, TypeScript, and AWS while earning a Software Engineering degree at UAG. Ships production transit software with TypeScript and PostgreSQL, and designs Terraform-provisioned event-driven workflows (Lambda, SQS, EventBridge). Open to Backend and Cloud engineering roles.

TECHNICAL SKILLS

Languages: Python, TypeScript, Rust

Backend & Data: PostgreSQL, FastAPI, Pandas, NumPy, scikit-learn, PyTorch, Streamlit, React, LangChain

Cloud & DevOps: Docker, Terraform, CI/CD (GitHub Actions)

EXPERIENCE

Software Developer

June 2026 – Present

Enrutate — Culiacán & Guasave transit platform

- Engineer and maintain a production bus route tracking app for multiple cities using TypeScript, Supabase, and PostgreSQL.
- Implement real-time updates and server-side validations that improve route accuracy for daily riders.

PROJECTS

phyScientific — Statistical Lab for Physics Simulations (GitHub)

- Built a feature-extraction pipeline and Streamlit dashboard for The Well **active_matter** sims; ANOVA, effect sizes, and Tukey HSD on control factors.

dev-market-insights — Job-Market Aggregator (GitHub)

- Engineered a FastAPI + React aggregator that ingests multi-source job listings, normalizes stack/seniority/salary, and surfaces tech-demand insights.

thinking-serverless — AWS Serverless & Event-Driven Architecture

- Built Terraform-provisioned EventBridge/SQS/Lambda workflows with FIFO queues and DLQs; documented idempotency and fault-tolerance.

naim-simple — ML Missing-Data Pipeline (Python)

- Developed a scikit-learn-style fit/predict/save/load API wrapping NAIM imputation for tabular preprocessing (PyTorch, Pandas).

devtool-pack — Cross-Platform DevOps Environment Automation

- Automated Terraform, AWS CLI, Docker, and kubectl setup across Windows/macOS/Linux in a single command.

PonyFlow — Multi-Agent Code Generation System

- Designed a self-correcting multi-agent Python pipeline (LangChain/Ollama) with a React + Tauri (Rust) desktop UI.

EDUCATION

Universidad Autónoma de Guadalajara (UAG)

2026 – Present

Software Engineering

CERTIFICATIONS

IBM Data Engineering Professional Certificate · AWS Academy Cloud Foundations · AWS CloudQuest: Cloud Practitioner · AWS Academy Generative AI Foundations · IBM Applied Software Engineering Fundamentals
