

Emilio Gordillo Esparragoza

Data Engineer & Backend Developer

emilio.gordillo.dev@gmail.com · Mexico · github.com/Emilio-Gordillo-Esparragoza · LinkedIn

PROFESSIONAL SUMMARY

Aspiring Data Engineer and Backend Developer with hands-on experience in Python, SQL/PostgreSQL, and cloud-native AWS architectures. Currently building production bus-route systems with TypeScript, Supabase, and PostgreSQL while earning a Software Engineering degree. Proven ability to design data preprocessing pipelines, automate DevOps tooling, and implement serverless event-driven patterns (Lambda, SQS, EventBridge, Terraform). Eager to contribute to ETL/ELT pipelines, APIs, and reliable backend services in a data-driven team.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript/JavaScript, PLpgSQL, Java, Rust

Data & Analytics: PostgreSQL, Pandas, NumPy, Apache Spark, scikit-learn, statistical analysis (ANOVA, t-tests)

Cloud & Backend: AWS (Lambda, SQS, EventBridge, serverless), REST APIs, Supabase, FastAPI, Flask

DevOps & Tools: Docker, Terraform, CI/CD (GitHub Actions, Jenkins), Ansible, Nginx, Git

EXPERIENCE

Software Developer

June 2026 – Present

Enrutate — Culiacán & Guasave transit platform

- Engineer and maintain a production bus route tracking application serving multiple cities using TypeScript/JavaScript, Supabase, and PostgreSQL (PLpgSQL).
- Implement real-time data updates and server-side validations to improve route accuracy and user experience for daily riders.
- Collaborate on backend data models and queries that support reliable tracking and operational consistency.

PROJECTS

thinking-serverless — AWS Serverless & Event-Driven Architecture

- Built deployable reference projects covering EventBridge fan-out, SQS/Lambda async workflows, FIFO queues, and dead-letter queues (DLQ).
- Provisioned infrastructure with Terraform and documented scalability, idempotency, and fault-tolerance patterns for distributed cloud systems.

naim-simple — ML Missing-Data Pipeline (Python)

- Developed a scikit-learn-style fit/predict/save/load API that wraps NAIM imputation for tabular datasets.
- Abstracted complex preprocessing into reusable components to accelerate model training workflows.

devtool-pack — Cross-Platform DevOps Environment Automation

- Built a modular Python package that automates installation of Terraform, AWS CLI, Docker, kubectl, and related tooling across Windows, macOS, and Linux.
- Reduced multi-tool environment setup from hours to a single command for reproducible developer workstations.

PonyFlow — Multi-Agent Code Generation System

- Designed a self-correcting multi-agent Python pipeline (planner → coder → reviewer) using local LLMs with LangChain/Ollama.
- Delivered a React + Tauri (Rust) desktop UI to monitor workflows with minimal external dependencies.

EDUCATION

Universidad Autónoma de Guadalajara (UAG)

2026 – Present

Software Engineering

CERTIFICATIONS

IBM Data Engineering Professional Certificate · AWS Academy Cloud Foundations · AWS CloudQuest: Cloud Practitioner · AWS Academy Generative AI Foundations · IBM Applied Software Engineering Fundamentals
